

# MuseWorx™

## Operating System

### ***MuseWorx Supported Conversion Formats***

Note: MuseWorx supports any type of files for Digital Asset Management. The following are formats that convert into 5 standard files sizes for use in collaboration, previewing and for portfolio use. Certain "active" file types are blocked for security purposes such as ".exe". As new versions of a file types become available, MuseWorx works to test and adapt with the manufacturer of the file type. For certain file types such as ".Raw", there are many manufacturers and the user will have to test whether her file type is supported.
